

FOR IMMEDIATE RELEASE

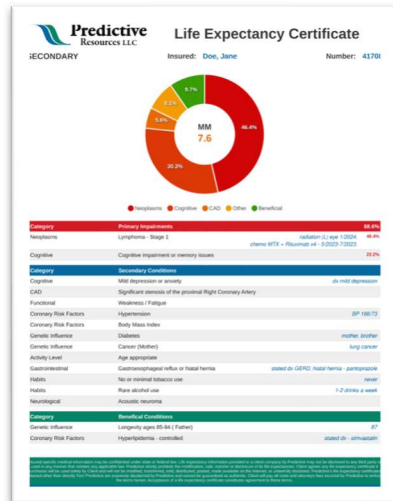

### Predictive Resources Unveils Enhanced LE Certificate: A Comprehensive Approach to Longevity Risk Assessment

Cincinnati, OH – Oct. 17, 2024 – Predictive Resources is excited to announce the launch of an enhanced Life Expectancy (LE) Certificate. This new tool exemplifies our commitment to leveraging advanced technology and client feedback to provide unparalleled insights into longevity risk.

In our pursuit of innovation, we introduced the LE Plus, an AI-powered medical summary designed to deliver vital information on each case. While we were confident in its potential value, feedback from our clients indicated a desire for a more comprehensive analysis of longevity risk components and their effects on the LE assessment.

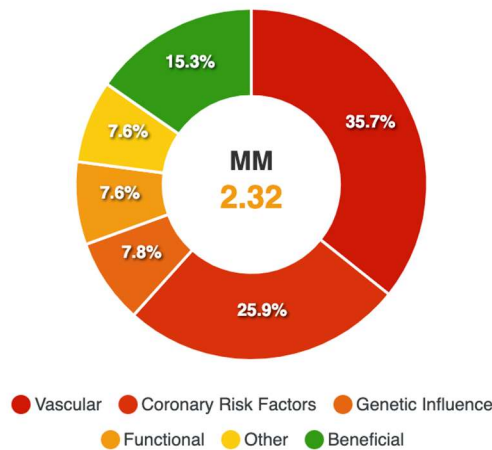

Taking this feedback to heart, we undertook a thorough reevaluation of the LE Plus. The result is a completely reimagined LE Certificate, unlike any other in the marketplace. Our enhanced certificate retains the use of AI to select relevant medical information, ensuring we provide pertinent insights while eliminating inconsequential details.

### Sample Report

The enhanced LE Certificate looks significantly different from our previous versions. It now includes many valuable new features, from category risk percentages and condition breakdowns by severity, to more detailed notes and summaries. Clinical reviews benefit from direct notes by the reviewing physician. Below are further details on some of the key new features:

**Impact Percentages:** Comprehensive data on the percentage impact of all categories of impairments on life expectancy, including each individual primary impairment.

**Quantitative Details:** A clear overview of primary impairments influencing life expectancy that account for at least 50% of the life expectancy, with a breakdown of impacts for each impairment. We also show secondary conditions that have less of an impact and beneficial conditions that extend longevity.

Category	Primary Impairments	56.8%
Vascular	Multiple Transient Ischemic Attacks and/or significant stroke with neurological deficits	21.1%
Coronary Risk Factors	Diabetes	21.1%
Vascular	Diabetic Angiopathy/Retinopathy <i>Diabetic retinopathy.</i>	14.6%

Category	Secondary Conditions
Liver	Chronic pancreatitis or alcohol-related pancreatitis

Category	Beneficial Conditions
Renal	Benign Prostatic Hypertrophy, Hyperplasia or elevated PSA <i>BPH.</i>
Endocrine	Hypothyroidism

**Detailed Notes:** Insights from underwriters are included next to each condition in blue on the above tables, but now we include a separate Underwriting Notes section with a detailed summary of the findings. In addition, if the case is flagged for a clinical review, we now include the clinician notes along with their references. We will continue to track and identify trending conditions that may affect life expectancy.

#### Underwriter Notes

The subject is diagnosed with a cognitive communication deficit described as MVA sequela; further workup regarding her cognitive disease is being planned. She is diagnosed with significant vascular disease. She suffered an amaurosis fugax, and her carotid duplex

#### Clinical Notes

This 64 year old patient with chronic pancreatitis underwent an MRI in May 2020 which showed a 1.6 x 1.6 cm ill defined hypo-enhancing lesion involving the uncinata process. In September 2020, a CT scan of the abdomen demonstrated the mass to measure 2 cm. The

#### Clinical References
